

The paging system from LRS works to reduce missed sales opportunities in automobile dealerships. The average dealership receives approximately 1500 calls a day. Therefore, it is imperative to have an efficient system in place to direct calls. Not only does the system improve customer service, it decreases the number of on-hold hangups.

Features:

- Telephone Interconnect - page from any extension.
- Group paging - Receptionists are able to page an entire department such as sales, parts, service, etc. The first one to the phone gets the lead.
- Over 65 canned messages such as SALES CALL, LOBBY, VISITOR, CALL EXT, SERVICE DRIVE, etc.
- Wireless programmability lets you reprogram pager numbers and groups at your office
- Can also be used to call customers via their own cell phone or pager when service has been completed
- Long Range Systems' pagers are the easiest to operate.
- Each pager operates on a single AAA battery (no charging stations required)
- Out-of-Range feature minimizes pager loss.

Benefits:

- Improve customer service
- Increase sales opportunities by minimizing customer hang-ups and lost sales
- Eliminate overhead paging resulting in a quieter, more relaxed environment.

T7450 Trinity

We also offer customer paging systems which allow you to page customers when service is complete, paperwork is ready or a service writer needs more information.
