

INTEROFFICE STAFF PAGING

Interoffice paging is the most efficient method to improve customer service and office atmosphere. With on-premise paging, you eliminate overhead paging and improve sales. When someone is not at their desk, they can be paged with messages such as: "Call Ext", "Parked Call", "Sales Call", "Visitor", "Lobby", etc. With the group-paging feature, you can call entire departments such as sales, so customers are not left on hold for long periods of time. Minimizing "On-Hold" times will result in improved sales and enhanced customer service.

Using the telephone interconnect feature, a person or group can be paged from any telephone in the building. Imagine how quickly you can get answers when you can locate people more effectively.

Features:

- **Telephone Interconnect** - page employees from any extension as well as from their voicemail*.
- **Wireless programmability** - lets you reprogram pager numbers and groups at your office
- **Group Paging** - Receptionists are able to page an entire department at once (sales, service, etc.)
- **Text Messages** - numeric pagers are programmed with 65 different fixed messages. The message appears letting you know the exact reason for the page.
 - Long Range Systems' pagers are the easiest to operate.
 - Each pager operates on a single AAA battery (no charging stations required)
 - Out-of-Range feature minimizes pager loss.

TELEPHONE INTERCONNECT

- 1. Code entered via telephone**
- 2. Transmitter sends page**
- 3. Pager vibrates or displays message**

Benefits:

- Improve customer service
- Increase sales opportunities by minimizing customer hang-ups
- Eliminate overhead paging resulting in a quieter, more relaxed environment.

(*Transmitter must be connected to a dedicated analog extension.)
